SLES, SLS, SILICONES.

## VIT COMPLEX Collagen-Hyaluronic Acid-Lactic Acid

All Skins

Format 10 ml

Cod. 1030020081

Regenerating and lighting up serum with a high concentration of Vitamin A B C E PP, Collagen and Hyaluronic Acid in synergy in a precious unicum. The innovative formulation that brings together the most important "molecules of youth," promotes cell turnover giving immediate radiance to the skin, strengthens and revitalizes the skin tissues by preventing and reducing fine wrinkles, discoloration and signs of aging.

**VITAMIN A:** Retinol prevents, delays and avoids the phenomena of skin aging. Indispensable in the protection and maintenance of structural and functional integrity of the dermis. It improves skin brightness, helps to reduce wrinkles, especially on skin damaged by UV rays.

**VITAMIN B5:** Pantothenic acid is known for its moisturizing properties especially if it works in synergy with Vitamin E. Vitamin B5 makes the skin soft and supple, promotes

tissue repair, soothes irritations.

**VITAMIN C:** The Ascorbic Acid, counteracts the oxidation processes of the dermis cells, strengthens and protects the fragile capillaries proving to be a good ally in the care and treatment of Couperose. In synergy with Vitamin E it provides the cells with hydration (water) and nourishment (lipids), enhancing the reciprocal effect. Recommended as anti-wrinkle due to its antioxidant and dermis collagen synthesis effect.

PETROLATUM, BHT/BHA,  
SLES, SLS, SILICONES.

**VITAMIN E:** Tocopherol improves the condition of the skin surface by acting as a protector of lipids present in cell membranes and maintaining a good water balance of the skin. It stabilizes Vitamin A and acting as a powerful antioxidant, protects the skin from harmful aggressions of free radicals. It plays a basic role in the formation of regenerative processes of tissues damaged by sunlight. It has an important anti-wrinkle action preventing its appearance and delaying the premature skin aging process. Also suitable for young skin due to the preventive action of oxidative processes.

**VITAMIN PP:** Vitamin PP, an ally of Vitamin C, strengthens and protects the fragile capillaries proving a good ally in the care and treatment of Couperose. It supports the structures of collagen, an important component of the dermis, promoting the elimination of old filaments and the synthesis of new ones. Vitamin PP significantly reduces the loss of water in the epidermis and increases the hydration of the stratum corneum.

**COLLAGEN:** Protein molecule fundamental for the health of connective tissue. In its hydrolysed formulation, it provides "bricks" for the synthesis of new collagen and reorganizes the extracellular matrix. In synergy with the Hyaluronic Acid Vitamins A, B, C, it protects and nourishes the cells of the epidermis allowing them to perform their normal functions. It slows down the normal process of aging, keeping skin young longer and blocks the degenerative processes that cause early deterioration.

**HYALURONIC ACID:** It is one of the main components of the connective tissue, giving resistance and turgidity to the skin. It stimulates the production of new collagen and elastin, together with the supporting structures of the dermis. Placing itself in the connective space of the amorphous matrix, in the form of an aggregated reticulum able to absorb a large number of water molecules, it guarantees the degree of hydration, turgidity, plasticity and viscosity, essential for the maintenance of a young skin. As an impact-effect molecule, it acts as a cementing agent, remedying the signs of aging and preventing cell damage directly from inside tissues. The skin is so compact and turgid, the expression lines softened and the face contours redefined.

**LACTIC ACID:** Belonging to the family of alphanhydroxy acids, it is able to break the bonds between keratinocytes facilitating their removal, thus promoting a faster cell renewal. It stimulates the synthesis of collagen (protein that gives structure to the skin) and of elastin (a protein that confers elasticity to the skin). It thus makes the eventual conveyance of active ingredients more effective and efficient and removes any deposits of melanin present in the most superficial layers of the skin. Moreover, thanks to its hygroscopic properties, it is able to attract water molecules up to the deepest layers of the skin, in order to make it more compact, soft and velvety to the touch.

## **DIRECTIONS FOR USE:**

Apply a small amount of product on the skin and tap until completely absorbed. Effective by itself or before the natural beauty cream to enhance its action.
