NUTRI-AGE CREAM Reproage[®], Snap-8[™], Hyaluronic Acid Regenerating cream *Dry and mature skin*

Format 50 ml

Cod. 1030020089

Precious regenerating face cream, indicated for dry and mature skin. Rich in innovative patented peptides, it effectively contrasts all the signs of aging, giving elasticity and radiance to the skin of the face, neck and décolleté. Its special nutri-soft texture allows rapid absorption. It protects the skin from photo-aging thanks to the presence of an organic compound capable of absorbing harmful solar radiation. The regenerating effect of ReproAge in combination with the tensor effect of the Snap-8[™], visually improves the look of face, giving it compactness, elasticity and brightness for a global anti-aging effect.

REPROAGE[®]

Innovative peptide that reactivates the regenerative potential of the epidermis, preventing the signs of skin aging and improving the appearance of mature skin. With age the regenerative capacity of the basal cells of the epidermis decreases with the consequent appearance of signs of skin aging: wrinkles, lack of elasticity and turgidity, opacity. Reproage reprograms the regenerative potential of cells at the epigenetic level: the result is a radiant and rejuvenated, smoother and more elastic skin. Reproage[®] slows the appearance of the signs of aging, rejuvenates mature skin, improving the look and brightness.

SNAP-8[™] PEPTIDE SOLUTION C

Innovative peptide that reduces the depth of expression wrinkles caused by facial muscle contractions, through a mechanism of action similar to botulinum toxin. Thanks to its micro-dimension it penetrates deeply and reduces excessive contractility of fibroblasts and tensions on collagen. It relaxes the skin, reduces expression lines and smoothes the face skin.

HYALURONIC ACID

It is one of the main components of the connective tissue, it gives resistance and firmness to the skin. It penetrates deeply, recalls and holds a large number of water molecules, guaranteeing hydration, turgidity and plasticity, indispensable for maintaining a young skin. As a shock-effect molecule, it acts as a cementing agent, remedying the signs of aging and preventing damage to the cells directly from within the tissues. The skin is thus compact and turgid, the expression lines are attenuated and the face contours redefined.

ETHYLHEXYL METHOXYCINNA- MATE

Organic molecule capable of absorbing harmful UVB solar radiation, protecting the skin from photo-aging.

DIRECTIONS FOR USE:

Apply a moderate amount of cream on cleansed skin morning and evening. During the day as a base for make-up and protection of the skin from photo-aging; in the evening as a nighttime regenerating.
